### Teaching Our Future

At the present time, I find myself interested in the field of computer science. Computer science is the study of computers and computational systems. It includes both hardware and software, as well as networking and the Internet. The hardware aspect of computer science overlaps with electrical engineering. It covers the basic design of computers and the way they work. Computer science entails many fields such as computer programmer, data scientist, and networking. Computer programming is the process that professionals use to write code that instructs how a computer, application or software program performs. Computer programmers create instructions for a computer to execute by writing and testing code that enables applications and software programs to operate successfully. Networking is the exchange of information and ideas among people with a common profession or special interest. A data scientist is someone who makes value out of data. The field of computer science offers a great potential.

My family background gives me a starting place to follow my dreams. My family is a group of five people such as my father, mother, and my two brothers. My family has a great communication which makes us stronger and very tight together. My family loves to travel around the world. Also, we enjoy playing indoor hide and seek. In fact, We are very happy because we keep things fair and always care about each one. Also, both my parents are hard

workers so they really take care of us, my two brothers and I. My family background has taught me that good things don't come easy and never fail to try more. I also learn to express myself , solve problems, and grow from my mistakes. In addition, nothing in life is free and hustle for what you love.

My educational background also provides a foundation for success. During my time in high school I had really good moments but my best moment was my senior year. I remembered the day I was supposed to do an English presentation. Also, I was an English learner and new student as well. So basically, I was afraid or shy to stand up in front of my classmates for the presentation but I did it anyway and I was so proud of myself for the effort I have made that day. Also, I have enjoyed the sports in High School such as basketball and baseball games. My English teacher has always made me feel very comfortable. She has motivated me a lot during her class time. For example, she has told me that even if English is not my first language I can do well. Also, she has recommended me to watch TV every day and read books in order to improve my English. My experience in school has taught me that I should trust myself no matter what.

Now that I'm in college, I will work strategically to make the most of the opportunity. There are other responsibilities that I have to manage. For example, I have to show respect to others. Also, I have to attend school unless there is a good reason for absence. In addition, I have to be punctual in attendance at school. There are other challenges that I face too. For instance, I may have poor grades and not studying or reading enough as well. In order to budget my time day by day, I will keep my documents and records organized and prioritize all of my tasks for the day. I will cultivate positive relationships with my professors and peers by sitting

in the front of the classroom and using office hours. By keeping a positive mindset at BMCC, I am sure that I will be one of the best students and graduate on time.

I look forward to gaining many opportunities at BMCC this semester. For instance, I will gain communication skills. I hope to master leadership skills, teamwork, and the Internet as well. Also, I hope to master studying skills and money management. In addition, I will seek assistance when needed. I will cultivate a positive relationship with my professor and my peers. For example, I will treat my faculty as I would like others to treat me. I will make sure to ask questions when I do not understand the material. Moreover, I will introduce myself after the first class and participate as a priority. Similarly, I will try to get a better grade in class. By keeping a positive mindset at BMCC, I am sure that I will go forward in my studies.
